

Dhruv Kumar Gupta

Aspiring AI/ML Engineer

+91-9456010415 | dhruvgupta05@gmail.com | linkedin.com | github.com

SUMMARY

AI/ML-focused Full-Stack Developer with hands-on experience building web applications using MERN stack, React, FastAPI, and Python. Experienced in developing machine learning projects involving data preprocessing, model training, API integration, and deployment. Passionate about solving real-world problems through scalable software and AI solutions.

TECHNICAL SKILLS

Languages: Python, SQL, C++, JavaScript

Data Analysis: NumPy, Pandas, Data Cleaning, Exploratory Data Analysis (EDA), Feature Engineering

Machine Learning: Scikit-learn, TensorFlow, PyTorch, Deep Learning, NLP, Computer Vision

LLM & Automation: LLM, RAG, Prompt Engineering, LangChain

Backend / Deployment: FastAPI, Flask, REST APIs, Streamlit

Databases: MySQL, MongoDB

EDUCATION

Uttarakhand Technical University, Dehradun

2023 – 2027

B.Tech in Computer Science and Engineering (AI & ML)

EXPERIENCE

Web Developer Intern | CodSoft

2025 – 2026

[Project-Link](#)

- Developed a job portal with dynamic job listings and structured database integration.
- Built responsive UI and backend APIs for handling job data and user interactions.
- Designed an interactive quiz application with real-time scoring and question flow.
- Applied clean coding practices and improved application performance.

PROJECTS

AI-Research Assistant

[Live-Link](#)

- Built an AI Research Assistant using React, FastAPI, and MongoDB with LLM and RAG concepts to help users upload research papers and interact with them intelligently.
- Developed an AI automation workflow using arXiv APIs to automatically discover research papers based on user interests and generate AI-powered summaries.
- Implemented a RAG pipeline with PDF text extraction, chunking, embeddings, and ChromaDB vector storage to support contextual question-answering from uploaded documents.

Health Prediction App

[Live-Link](#)

- Built a full-stack AI-powered health risk prediction system using React, Node.js, Flask, and MongoDB, enabling real-time medical risk analysis.
- Built a full-stack AI-powered health risk prediction system using React, Node.js, Flask, and MongoDB, enabling real-time medical risk analysis.
- Integrated a trained ML model (via Flask API) to perform real-time predictions based on user health parameters.

Driver Drowsiness Detection System (OpenCV + MediaPipe)

[Demo-Link](#)

- Built a real-time driver drowsiness detection system using OpenCV and MediaPipe.
- Implemented EAR & MAR-based fatigue detection with temporal filtering to reduce false alerts
- Integrated a real-time alert system to trigger warnings during drowsiness conditions.
